Professional Summary

Graduate in BCA Data Science with hands-on experience, from scraping and analysis to deployed dashboards and automated pipelines. Strong on translating messy requirements into working systems, debugging production edge cases, and making data readable for non-technical stakeholders. Background spans analytics, automation, and applied research. Looking for roles where the work is practical and the output actually gets used.

Skills

Analytics & BI	Power BI, SQL, Python, Excel, Pandas, KPI Reporting, Data Visualization, EDA, Statistical Analysis
Development	Python, HTML, CSS, JavaScript, Streamlit, REST APIs, Web Scraping (BeautifulSoup, Requests), GitHub Actions (CI/CD)
AI & Automation	LLM Integration, Prompt Engineering, Workflow Automation, Telegram Bot API, YAML Configuration Design
Databases	MySQL, SQLite
Business & HR	HR Analytics, Recruitment Analytics, Workforce Insights, Dashboard Development, Reporting

Projects

AI-Powered SEO Audit & Intelligence Suite

2026

Python • Streamlit • BeautifulSoup • Pandas • Plotly • ReportLab github.com/Athiradhkp04/searchlens

- Engineered a 10-module SEO audit pipeline covering metadata analysis, content quality scoring, technical SEO checks, and page performance; outputs a weighted composite score with ranked, plain-language remediation recommendations.
- Validated against live production websites; identified and resolved real-world edge cases including HTTP 429 rate-limit false positives, HTML parsing inconsistencies, robots meta misclassification, and empty/image-wrapped anchor false positives.
- Implemented multi-format report export (JSON, CSV, PDF via ReportLab) and a modular architecture designed to support AI-generated recommendation output.

Automated Job Intelligence & Orchestration Engine

2026

Python • BeautifulSoup • Requests • YAML • GitHub Actions • Telegram Bot API github.com/Athiradhkp04/job_bot

- Built an end-to-end automated job-discovery pipeline scraping listings across 6+ role categories, applies configurable multi-tier filtering, deduplicates via JSON state, and delivers ranked results to Telegram on a scheduled basis.
- Designed a two-dimensional priority-ranking engine combining role-tier and location-tier scoring with conditional stipend bypass logic; implemented pay normalization to reconcile monthly vs. annual formats across listings.
- Engineered resilient URL-pattern-based scraping with multi-page pagination handling to prevent missed listings as source-site markup changes; replaced fragile CSS-selector parsing for long-term maintainability.
- Deployed serverless via GitHub Actions cron (3× daily); fully declarative YAML configuration enables no-code reconfiguration of roles, locations, and filters without touching source code.

Inquis — Personal Finance Tracking & Reporting System

2024

Python • Streamlit • SQLite • Pandas • Plotly github.com/Athiradhkp04/Inquis_Expense-repo

- Developed a multi-page Streamlit dashboard for personal expense tracking with SQLite-backed persistent storage, supporting full CRUD operations, category-based filtering, and date-range queries.
- Built an analytics layer featuring KPI cards (total spend, daily average, top category), interactive Plotly visualizations (spending trend line, category donut, monthly bar chart, 7-day rolling average), and day-of-week spend pattern analysis.
- Deployed to Streamlit Cloud; publicly accessible live demo maintained as a portfolio artifact.

Research Experience

Co-Author – Academic Responsiveness to Structured Peer Support: A Predictive Profiling Study 2025 – 2026
2nd International Conference on Intelligent Computing and Knowledge Extraction (ICICKE 2026) — Under Review

- Contributed to a multi-author quasi-experimental study examining the psychological, behavioral, and academic effects of a structured peer-support intervention among undergraduate students across three cohorts.
- Performed comparative statistical analysis using one-way ANOVA, Bonferroni-corrected pairwise t-tests, and Cohen’s d effect-size estimation to evaluate intervention outcomes across experimental and control groups.
- Applied feature-selection and predictive modeling techniques — Pearson correlation, Random Forest importance ranking, and multinomial logistic regression (SciPy, Scikit-learn, Pandas) — to profile pre-intervention variables most predictive of academic responsiveness.
- Co-developed data visualizations and analytical interpretations to communicate findings on student motivation, self-efficacy, and academic performance across response profiles.

Education

Bachelor of Computer Applications — Data Science 2023 – 2026
Amrita Vishwa Vidyapeetham, Mysuru • CGPA: 7.67

Certifications

HackerRank SQL (Intermediate)	2025
Microsoft Power BI Learning Path	2025
HR Analytics — Great Learning	2025
Java Programming — NPTEL / IIT Kharagpur	2024

Languages

Malayalam (Native) • English (Professional) • Hindi (Conversational) • Tamil (Conversational) • Kannada (Conversational) • French (Beginner)
